

Instrumentation support

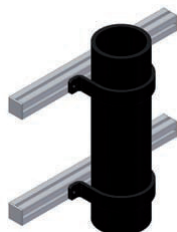

This instrument stand allows for support of any tool accessories (switchboard, printers, bush changes, etc.) keeping them close in order to guarantee that they can easily be cabled and used by the operator. In the standard configuration, the instrument stand consists of two 45x45 aluminium profiles 500mm long, and two steel grips for the column Ø140.

The configuration of this support varies depending on the requirements, therefore the diagrams below show only some of the possible versions.
